

SaltERP is an integrated information system for companies' resource management to optimize and streamline the internal business processes. SaltERP is a multi-module system, specially designed to standardize the productive or decision-making processes by introducing the best practices specific to each business sector.

SaltERP has a modular, flexible and configurable architecture, designed for the optimization of the management of complex organizations, regardless of their size. The solution offers a unique view over the entire activity, reduces operational costs, integrates workflows and increases the company's agility.

HRMS (Human Resources Management System) MODULE

HRMS module helps to revolutionize a workplace. The automation of repetitive and time-consuming tasks associated with human resources management frees up some of the companies most valuable employees and allows the focus to shift to culture, retention, and other highly impactful areas.

HRMS module helps the HR department in tracking employee histories, skills, abilities, attendance and salaries etc.

Key Features

- Employee Management
- Recruitment Management
- Attendance & Leave Management
- Payroll Management
- Employee Appraisal Management
- Employee Self Service Module

CRM (Customer Relationship Management System) MODULE

Companies use SaltERP CRM module to manage and analyze customer interactions and data throughout the customer's lifecycle, with the goal of improving business relationships with customers, assisting in customer retention and driving sales growth.
